GitHub Pro: four dollars a month for a lock on the private desks

The first proposal written against the expense ledger. Small, specific, and the kind of line a sole proprietor keeps on purpose.

Proposal 001 | Status asking | Started 2026-11-04 | For Christopher

TL;DR

1. **The problem it solves.** On Nov 4, 2026 Kenney was given write access to `proposals-thef`, a private repository under Christopher's personal account. GitHub Free cannot put a rule in front of `main` on a private personal repository: the API answered "Upgrade to GitHub Pro or make this repository public to enable this feature" when the rulesets were read. The same limit will meet `ops-arb` and every other private desk shared with a partner.
2. **What Pro buys.** Repository rules and branch protection on private repositories (a pull request before anything lands on `main`, required checks such as the tripwire self-test and ggshield, required reviewers, CODEOWNERS), GitHub Pages on private repositories, and more Actions minutes. Price: **$4 a month** for an individual account, as GitHub's upgrade prompt and billing page name it; the public pricing page shows the organisation equivalent, Team, at $4 per user per month.
3. **What it does not buy.** Nothing for the organisations (THEF, PIR, ORG, Psanctuary, the Church, Taylor's, Jeff's): their private repositories would need Team, per member. The reading rooms are the right fence there, and they are free. Pro covers Christopher's own private repositories only.
4. **Until it is bought,** the watchdog on `proposals-thef` reports every push by anyone but the steward (WATCHDOG.md there). A watchdog barks; Pro is the lock.
5. **The expense line.** $48 a year, 100% business: every repository on the account is the work. It goes on the ledger the day it is bought, with the receipt's folder named.

> ***What Pro will not do (checked Nov 5, 2026).*** *It does not make anyone read-only. GitHub's page says "Collaborators can't have read-only access to repositories owned by a personal account" and points to moving a repository into an organisation. Pro's rules decide how a collaborator's change lands (a pull request first); the person still holds write. A true read-only seat needs an organisation repository, as the reading rooms already do.* *https://docs.github.com/en/account-and-profile/reference/permission-levels-for-a-personal-account-repository*

Decision

Door	Cost	What changes
A. Buy Pro now	$4/month	turn on rules for `proposals-thef`, `ops-arb` and any desk a partner can write to: pull request required on `main`, the tripwire self-test and ggshield as required checks, one review; the watchdog stays as the record
B. Wait	$0	the watchdog is the only guard; every push is in history; fine for a drafting desk, thin for a desk holding procedures
C. Move shared desks into an organisation	$0	read-only members become possible, but a lab desk stops being a lab desk; the reading rooms already give partners the read side

Lean: **A**, when the next card cycle allows; **B** until then, with the watchdog in place.

The steps after buying

1. GitHub → Settings → Billing → Plans → Pro.

2. For each shared private desk: Settings → Rules → Rulesets → New branch ruleset: target `main`; require a pull request before merging (1 review); require status checks (the tripwire self-test, ggshield); block force pushes. The same for `preview` where a desk uses it.
3. Add a `CODEOWNERS` naming the steward for `PUBLIC-ALLOWLIST*.txt`, `.github/`, `scripts/`.
4. Add the row to EXPENSE-LEDGER.md with the receipt's folder.

Sources: GitHub's API message on `repos/drasticstatic/proposals-thef/rulesets` (2026-11-04); github.com/pricing (read 2026-11-04; Team $4 per user per month, Enterprise $21). Not tax advice: whether the line is deductible is a CPA's call; the ledger only keeps it honest.
